

Power generation should be as dynamic, responsive, and human as the technologies it supports.

The Future Feels Like

Flexible, Fast Power

LPI is a **full-service energy provider**, delivering bespoke, natural gas power generation and fueling solutions that *help businesses thrive* in a high-demand, technology-driven world.

Simplified Construction & Proven Design

Our **modular, scalable power blocks** are built for *speed, reliability, and impact*, bringing power dependable online faster than traditional utilities.

Generation blocks meet loads from **25 MW to 1 GW** across diverse site conditions

Load-following natural gas engines respond instantly to demand and integrate with microgrid control systems

Power that **grows with you**—modular design seamlessly scales up as demand increases

Tailored Service Solutions

FORTE

MODULAR NATURAL GAS GENERATION

Forte delivers distributed and scalable natural gas generation with grid-level reliability on-site, combining advanced load management and flexible operations with full-service fuel, logistics, and 24/7 monitoring.

CHORUS

SMARTER POWER MANAGEMENT

Chorus blends grid interconnection and asset power for greater reliability, lower costs, and price stability, creating adaptable future-proof power solutions in evolving markets.

Compact, Efficient Footprint

Our modular design delivers **substantial power capacity with minimal land use**—one acre per 25 MW power block .

Power blocks can be strategically positioned throughout a site to maximize efficiency and align with property needs, ensuring reliable power without compromising valuable space.

500 MW
on 21 Acres

A Clean, Flexible Power Source

LPI's natural gas reciprocating engines quickly respond to customer load conditions and autonomously coordinate with the microgrid control system to reliably provide a load-following power supply.

Built-in quick start-up and black start capability improve resilience and energy security.

Lowest-Emission Natural Gas Generation Available

Our plants leverage industry-leading technology with emission controls standard on every engine.
